

IN THE SPECIFICATION

Please amend the paragraph on page 3, lines 5-9 as follows:

The prior art also discloses ~~American patent application~~ U.S. Publication No. US 2003/085595, which relates to a glazing unit comprising a glazed element provided with a peripheral frame incorporating an insert connected to the latter by means of an overmolding plastic.

Please amend the paragraph on page 10, lines 30-32 as follows:

Figures 3b, 4b, 5, 6, 7, 8b, 9b, 9c, and 10 depict a glazed element 10 provided with a peripheral frame or with frame elements, collectively referenced as 30, made of plastic overmolded onto said glazed element 10 and incorporating at least one element for reinforcing the glazed element. Figures 3a and 3b show the same reinforcing element 13, 13': a profile having a U shape in cross section.

Please amend the paragraphs on page 11, lines 15-26 as follows:

In figure 3b, the reinforcing element 13' is arranged according to the invention. The amount of overmolding material 9 confined between the reinforcing element 13' and the glazed element 10 is small. The reinforcing element 13' defines a pocket 32 having an open side that is directed away from glazed element 10. The main part of the overmolding material 9 can expand in the direction away from the glazed element 10, and is thus unable to exert any stress toward it.

Figures 4a and 4b show another reinforcing element, 14, 14' respectively, comprising a web and two lateral arms that are situated at the ends of the web and folded over at a right angle toward one another at their free ends. In figure 4b, a pocket 32 defined by reinforcing element 14' has an open side that is directed away from glazed element 10.

Please amend the paragraph on page 12, lines 13-17 as follows:

The reinforcing element 17 represented in figure 7 differs from that in figure 6 in that ~~[[it]]~~ it's pocket 32 is filled with overmolding material 9. In both cases, the overmolding material will not expand in the direction of the glazed element 10.

Please amend the paragraph on page 12, lines 29-34 as follows:

In figure 8b, it can be noted that the projecting part 12 of the reinforcing element 18' is folded over inwardly to define a pocket 32, confining some overmolding material 9 within it, and preventing it from expanding in the direction of the glazed element 10.

Please amend the paragraph on page 13, lines 12-15 as follows:

In figure 9b, the web 11 closes the U formed by the projecting parts 12 and defines pocket 32, and in figure 9c, the projecting parts 12 form, in cross section, a U defining pocket 32 that is open away from the glazed element 10.
